Aniruddh Upparna, Front-end web developer

Ph: +91-7760556801

email: aniruddhupparna@gmail.com

SUMMARY

Currently working as a full stack developer at Skan.ai, a start-up focussed on business process discovery. Trained in various front-end web frameworks/ libraries like React, Angular, jQuery , as well as HTML5, CSS3, JavaScript, and CSS framework like Bootstrap.

WORK EXPERIENCE

Sapient Corporation, October 2016 to June 2019

Junior Interactive Developer – Abbvie-UGC

The project was a website acting as a platform to share stories of patients affected by Hidradenitis suppurativa (HS) and to educate people about common misconceptions of the disease.

- Resolved several issues related to overall layout of the page (CSS3) and worked on making the webpage near pixel perfect.
- Solved cross-browser layout issues and have also completed change requests assigned by clients.

Interactive Developer – Shire (Baxalta)

The project was a B2B commerce website for a pharmaceutical company. Tech stack used here was jQuery, bootstrap, less (CSS).

- Took up the task of creating email versions of receipts for 4 feature pages. It involved not only developing email versions for one mail client, but it had to look similar in outlook desktop mail client, outlook webmail (both which did not consider modern CSS support) and yahoo email.
- Taken minimum time to ramp up and integrate UI with Hybris server side and worked on critical modules like login flow, switch account, potency report.
- Project was initially targeted to desktop viewport only. Worked on making many parts of the website responsive which came as CR in the ending stage of the project.

Interactive Developer – Cargill (DSC)

The project was a B2B website for agricultural services and inventory management for agricultural products. Tech stack used here are HTML, post CSS, React, ES6 and Responsive Design.

- Worked on common UI Components for the application using ReactJS and Lostgrid (CSS), which is reusable for different tracks.
- Worked on functionality of edit arrival, edit and delete contract using formik library for forms.
- Worked on functionality part for uploading and downloading contract documents.
- Wrote unit test cases for all components developed.

Skan AI, June 2019 to present

Sr. Software Development Engineer 2

The product is a process mining and process discovery platform for uncovering enterprise business process.

Currently working as front-end developer (Angular 7+) and backend developer (python - Flask APIs + MongoDB) on several core modules of the product.
